Fundamentals & Problem Solving

Welcome

This round focuses on core Android and Kotlin/Java fundamentals, along with your ability to reason through problems and code.
We're interested in how well you understand concepts and apply them logically.

What This Round Evaluates

- Strength of Android and Kotlin/Java fundamentals
- Ability to read, analyze, and improve code
- Problem-solving and reasoning ability
- Awareness of runtime basics (threading, memory)

General Guidelines

- Think out loud and explain your reasoning
- Clarify the problem before solving
- Break problems into smaller parts
- Be open to hints and iterate

What Makes a Strong Candidate

- Solid understanding of core concepts
- Identifies issues in code and explains why
- Applies structured thinking
- Communicates clearly and logically

Common Pitfalls

- Weak understanding of fundamentals
- Ignoring edge cases or obvious issues
- Jumping to solutions without analysis
- Not explaining thought process

Final Advice

Focus on clarity, correctness, and reasoning over speed.
Even if unsure, walk through your thinking.

Key Takeaway

Strong fundamentals + clear reasoning are more important than perfect answers.
